

EIF intervention

The Enhanced Integrated Framework has been described as the Gateway to Aid for Trade for LDCs.

A major focus here has been building productive capacity, and better linking EIF countries into global and regional value chains.

Cotton by-products provides an exciting area for development, and indeed has been met by a high degree of interest from EIF Member Countries.

As a partnership of the LDCs, Donors and international agencies, the EIF has been pleased to support the initial feasibility study and design work for an investment programme for Cotton by-products.

We anticipate that, with the leveraging of support from various partners, this will be the gateway to unlocking additional value and trade through more effective development of Cotton by-products.

Thank you
